Cheat Sheet for apt-get commands

Update and Upgrade	
sudo apt-get update	Updates the package database
sudo apt-get upgrade <package>	Upgrades an already installed package
sudo apt-get update && sudo apt-get upgrade -y	Update your entire system packages

Search for packages	
apt-cache search <search term>	Searches for packages similar to the search term
apt-cache pkgnames <search_term>	Searches for a specific package
apt-cache showpkg <package>	Shows version, dependencies etc for the package

Install Packages	
sudo apt-get install <package_1> <package_2> <package_3>	Install one or several programs simultaneously
sudo apt-get install <package> --no-upgrade	Only install an not already program
sudo apt-get install <package> --only-upgrade	Only upgrade an already installed program
sudo apt-get install <package>=<version_number>	Install a specific version of a program

Remove installed packages	
sudo apt-get remove <package>	Remove a program
sudo apt-get purge <package>	Remove a program and its configuration files

Clean the system	
sudo apt-get clean	Cleans the local repository cache of retrieved packages
sudo apt-get autoclean	Cleans retrieved packages that have newer version now
sudo apt-get autoremove	Cleans dependencies of an already removed program
